PROCESS OVERVIEW

✓ STEP 1

Download a FREE
MetaTrader4 (MT4) Broker Trading Platform.

✓ STEP 2

Set Up your MT4 platform.

✓ STEP 3

Install Your Expert Advisor (EA or Robot)
into your MT4 platform.

✓ STEP 4

Set Up your EA Inputs

DOWNLOAD FREE MT4 TRADING PLATFORM

STEP 1:

There are 2 options available to every trader.

1. Use a demo account (a risk free practice account).
2. Use a live account (a real account you must fund with real money).

The Demo and the Live accounts look identical – the difference is in the set up (the Live requires proof of identification and funding of equity – the Demo is 'pretend money' and totally no risk at all – you can try out a starting balance of \$50,000 or \$100,000!).

There are hundreds of MT4 brokers worldwide all which the Enforcer Robot will work seamlessly on.

For example GoMarkets MT4 Broker www.gomarketsaus.com

When you click either the live or demo account above it will take you through to a sign up page where you will enter your name details... you may need to scroll down the page to see this on some PC's.

Click on **RUN**.

After the download is complete, please double click on the setup program (m4setup.exe) and you will get a screen like this:

Choose your language and follow the instructions to install MetaTrader4.

Select the program to launch after installation.

Launch GoTrader4 platform after you finish the installation. You will be prompted to open a demo or a live account.

Fill out the form and follow the instruction to set up the account that is appropriate to you. Please remember to write down the login id, password and investor id. Keep it in a safe place.

Now that you have installed the MetaTrader4 program and opened an account. Please proceed to Step 2 to set up your MT4 platform correctly.

SET UP YOUR MT4 TRADING PLATFORM

SET YOUR EA SETTINGS

On the menu bar, please choose TOOLS then OPTIONS.

When the OPTION dialog pops up, click on the EXPERTS ADVISORS tab.

TICK "Enable Expert Advisor" and "Allow live trading".

Then click OK to accept the change. See picture below.

SET UP YOUR CHART

The Forex Enforcer Automatic Robot was optimized on the **EURUSD pair on the 1 Hour Chart**.

Right click on EURUSD from the MARKET WATCH window. When the menu pops up, choose "Chart Window".

On the periodicity toolbar, click H1. Note that H1 stands for the 1 Hour Chart. Each bar in the chart represents 1 Hour. Notice I have circled the H1 button and also on the chart it will then reflect the EURUSD pair and the time frame H1.

NOW CLOSE YOUR MT4 platform.

EXPERT ADVISOR INSTALLATION

1. First ensure your MetaTrader4 Trading Platform is **CLOSED**.
2. Then find the location of your Expert Advisor (EA)... where you saved the Expert Advisor (.ex4 file) to your hard drive (*remember when you downloaded this manual, the EA and System Manual*). This can be found through My Computer (*also called Windows Explorer - found via your START then COMPUTER*).
3. When you locate the file hover your mouse above the .ex4 file.
4. Right click your mouse and a popup menu will give you a list of options.
5. Select COPY.
6. Then go through MY COMPUTER (Windows Explorer) and expand the C:DRIVE, then expand PROGRAM FILES, then find your MT4 Broker (eg; GoTrader4 etc) – expand that folder, then EXPERTS folder.
7. When you have found the EXPERTS folder RIGHT CLICK on that name and click PASTE.

Then reopen your MT4 Broker Platform.

On the left hand side in the Navigator window, open the "Expert Advisors" folder.

If you see "FX Enforcer" listed under the folder, as in the picture below, it means the EA is now installed onto your MT4 Trading Platform.

Congratulations! Now you are ready to use the EA. Next we will look at starting to trade with the EA.

STARTING THE EA TO TRADE

In the Navigator window, double click "FX Enforcer" under the "Expert Advisors" folder.

A pop up dialog box will appear called INPUTS.

Default INPUT Settings

The DEFAULT settings are what you see below.

These default settings are the 'best' performing settings for the EA. So please leave all as they are except for the RISK setting.

RISK and/or Lot Settings: The important setting you need to consider changing is the risk input. Please now go to the next page to read your options for the risk settings.

Risk Input Settings (POSITION SIZING).

Risk management is the most important component to trading. And best to work on the basis of a worst case scenario.

In the Forex Enforcer Automatic there are two settings that can be used to determine the POSITION SIZING that the robot will take on each new trade.

- 1. standard LOTS**
- 2. or % RISK**

Lots

If you want the robot to enter into an exact number of lots every time it trades you put a number in here. For example: **1** (Lot).

But for the Lot Input to work you need to change the RISK to Zero (0).

Let's assume you had a Micro Account where every 1 Lot meant you could lose or gain \$1 per pip movement.

The Forex Enforcer Automatic's default Stop Loss is at 80 pips. This means for every 1 Lot entered into within a Micro Account the maximum risk of the trade is \$80 (80 x \$1).

If your starting balance was \$2,000, then your \$80 dollar risk on your 1 Lot is a 4% risk of your starting balance (\$80 divided by \$2,000). This is a comfortable risk.

But what if you had 3 losing trades in a row, and each time you lost \$80, your loss would be \$240 in total leaving \$1,760. But your total risk on your account balance is increasing...

On your 4th trade your risk has increased to 4.5% (\$80 divided by the new balance of \$1,760). And would continue to do so if your balance decreased.

The best control is to use the 'Risk %' setting, see over page for explanation.

Risk %

The other selection is the RISK – the Forex Enforcer Automatic default is set on 5%.

This means that the robot will automatically calculate the appropriate number of Lots you can enter into according to the new account balance after each trade.

If your starting balance is \$2,000 and your risk is set at 5% this means that on each trade you do not want to risk more than \$100 on each trade. And as the Stop Loss is at 80 pips from the entry, if your Micro Accounts pip value was \$1 per pip movement, then your risk is \$80 per 1 lot.

The robot then calculates $\$100 \div \$80 = 1.2$ Lots it can enter into.

If your trade is profitable and you make a \$200 profit – on the next trade the robot automatically makes the same calculation but on the new \$2,200 balance.

This is the better setting as you know exactly how much of your account you are risking on each trade.

Turn the default figure down if 5% is too much.

The Risk % will override the Lot settings, so if this Input has a figure in it larger than Zero then the robot will ignore the Lot Input.

Once you have adjusted the Risk Settings click OK.

Now you should see the label "Forex Enforcer Automatic" with a smiley face on the top right hand corner of your chart. This confirms your robot is on and ready to start trading. See picture below. Our EA is now in action.
